

Method Comparison	Our Method: Heat Processed	Their Method: Cold Pour
Dentures are cooked in a hot water bath for 6 to 8 hours to remove harmful petroleum oils.	✓	
Use imported, high impact, break-resistant and cadmium free acrylic to form dentures. Teeth are high quality with the cutting or biting surface already established.	✓	
Teeth are special ordered for each patient, based on age, complexion, eye color, face shape, and shape of original dentures. Your dentures are truly “one of a kind”.	✓	
“Show and Tell” and “Try-in” phases ensure patient satisfaction before dentures are delivered.	✓	
Teeth are warranted against breakage for at least ten years; company stands behind its work. Creates beautiful, high-end dentures at prices about 60% lower than retail prices of many clinics.	✓	
Dentures are made using quick-curing acrylic – harmful petroleum oils remain due to a thirty minute cooking time followed by hours on a laboratory countertop to solidify! (Ending up your mouth)		✓
Quick-set teeth break off more easily, requiring repairs, remakes, and repairs due to the use of “cheap” materials.		✓
Dentures made using inexpensive teeth and “cheap” materials have no long term guarantee of quality.		✓
No “Show and Tell or Try-In” phase with economy dentures, no custom-made aspect, and dentures are often delivered immediately following full mouth extractions or surgery.		✓

At Bay Area Denture & Surgery Center, we fabricate custom dentures that we **KNOW** do not contain harmful, carcinogenic materials, thereby creating a safer, healthier, top quality product for our patients. Our mission is to provide the healthiest, patient-centered environment in all services we provide. Dr. Van Maren and his caring staff look forward to creating a beautiful, healthy smile for you!
